TUAN T. LAM
PRIMARY EXAMINER

Art Unit: 2816

1. The following is an examiner's statement of reasons for allowance: the amendment filed 8/25/2004 has overcome the prior art of record. The prior art of record fails to teach or fairly suggest a pulse generator that produces a pulse of variable width when the output clock signal approaches the in-synchronization state as the adjustable delay is increased and a latch that is triggered by the pulse to generate the in-synchronization signal when the width of the pulse reaches a pulse width Z required to trigger the latch as called for in claim 3, increasing the adjustable delay to bring a cycle of the delay-adjusted delayed output clock signal to be increasingly in synchronization with a subsequent cycle of the reference clock signal until a synchronization condition is reached where mark of cycle of the reference clock signal delayed by the first delay and the second predetermined delay Y appears in the window to indicate that the delay-adjusted delayed output clock signal leads the reference clock signal by adjusted delayed output clock signal leads the reference clock signal by the phase difference X that is equal to the second predetermined delay Y as called for in claim 12. Therefore, claims 3-9 and 11-16 are presently allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
